Learn about cash flow of programmers around you.

- Tarteeb.uz**

A Standard-compliant task management software

- akbar-rich.uz**

Website for a door production company.

PROFILE

I have experience building scalable web apps with .NET. Skilled in feature development and workflow stabilization, with a focus on clear separation of business logic and dependencies.

WORK EXPERIENCE

Full-Stack .Net Developer

Tarteeb | Tashkent

2022-04 - Present

- Created microservices for 2 projects based on the book The-Standard by Hassan Habib.
- Performed extensive data validation and implemented clear separation between the main business logic and external dependencies.
- Improved the code quality by performing maintenance tasks, cleaning up the code, and ensuring that it adhered to coding standards..
- Designed and developed RESTful APIs for various applications.
- Wrote unit tests using the Test-Driven Development (TDD) approach.
- Implemented continuous integration and continuous deployment (CI/CD) pipelines for projects.
- Developed the front-end of web applications using Angular framework and TypeScript language.
- Resolved software issues by fixing bugs and addressing production-related problems
- Actively participated in daily code reviews with team members, providing feedback and identifying potential bugs and issues.

.Net Developer

NoIBir || Tashkent

2021-05 - 2022-04

- Successfully developed the backend of an online market that is currently being used by a large number of customers on a daily basis.
- Gained valuable experience in working collaboratively with team members to achieve project goals.
- Utilized Git and Github for version control, code management, and team collaboration, including reviewing and merging pull requests.
- Practiced Test-Driven Development (TDD) approach and wrote unit tests to ensure the reliability and robustness of the codebase.
- Improved the overall code quality by increasing test coverage from 0% to 30% in unit tests.
- Worked with caching systems like Redis to improve application performance and reduce database load.
- Ensured consistency and integrity of data by establishing relationships between models in the database.
- Collaborated with frontend developers to integrate the backend API and ensure seamless functionality of the entire application
